3.3	Description of additional info.	<p>*Calculated by the standard Scenario for Printer (EP type)                      *CO<sub>2</sub> emission in the distribution stage assumes North America as the main sales area.                      *Electric power in the use and maintenance stage is evaluated with the public electric-power-consumption -rate in North America.                      *The CO<sub>2</sub> emission due to printing paper is excluded from the use and maintenance stage.                      *Print volume is assumed 540,000 sheets.</p> <div style="display: flex; align-items: center;">  <div style="margin-left: 20px;"> <table border="1"> <tr><td>Raw material acquisition stage</td><td>14%</td></tr> <tr><td>Production stage</td><td>2%</td></tr> <tr><td>Distribution stage</td><td>2%</td></tr> <tr><td>Use &amp; maintenance stage</td><td>78%</td></tr> <tr><td>Disposal &amp; recycling stage</td><td>4%</td></tr> </table> </div> </div>		Raw material acquisition stage	14%	Production stage	2%	Distribution stage	2%	Use & maintenance stage	78%	Disposal & recycling stage	4%
Raw material acquisition stage	14%												
Production stage	2%												
Distribution stage	2%												
Use & maintenance stage	78%												
Disposal & recycling stage	4%												
3.4	Remarks	*Print volume: 540,000 sheets *In this scenario, the CO <sub>2</sub> emissions from copy papers are estimated 4,200 kg-CO <sub>2</sub> e at 4.0 g per A4 paper.											

4. Interpretation of CFP quantification results		
4.1	Interpretation of CFP quantification results	<p>CO<sub>2</sub> emission in use and maintenance stage is the largest as 78%. It is important to save energy during product usage. The use condition in this scenario can be different from the use condition of the user.</p> <p>A choice of the use condition (print mode, print conditions and so on) can reduce the CO<sub>2</sub> emission during product usage. For example, 255kg-CO<sub>2</sub>e of the CO<sub>2</sub> emissions (approximately 20%) can be reduced if 2-in-1 print is applied to 270,000sheets (50% of print volume).</p> <p>Primary data is used in the raw material consumption. Secondary data is used in the parts manufacturing process which might not be reflected our own circumstances because it is difficult to collect the data for thousands of the parts. Please understand this result as the rough estimate according to the reason mentioned above.</p>

5. Conditions of quantification
