

Annex A (normative): Life cycle flow chart

The chart below shows a typical example of using this service in the disposal and recycling stage after the use of another product in its life cycle.

(Provisional Translation) (Sep. 8, 2010) PA-BM-02,
Waste Incineration and Landfill (Intermediate Service)

* This chart shows such a typical flow of waste incineration and landfill that calculation can be conducted by using this PCR (PA-BM-02).

However, there is the case that flow of treatment and landfill of incinerated residue differ by waste treatment operator. In this case, calculation may be conducted after revising this flow chart to the new one based on actual flows.

If waste treatment operator has several flow patterns of treatment and incineration after incinerating wastes, calculation is required by the each flow (including branches of residue and dust).
