Value in CFP mark and description of additional info.			
3.3	Value in CFP mark	<Numerical value>	<Unit for the value>
		<b>1,300 kg</b>	per unit product
3.3	Description of additional info.	<p>*Calculated by the standard Scenario for MFP (EP type)                      *CO<sub>2</sub> emission in the distribution stage assumes Japan as the main sales area.                      *Electric power in the use and maintenance stage is evaluated with the public electric-power-consumption-rate in Japan.                      *The CO<sub>2</sub> emission due to printing paper is excluded from the use and maintenance stage.                      *Print volume is assumed 375,000 sheets.</p> <div style="display: flex; align-items: center;">  <div style="margin-left: 20px;"> <ul style="list-style-type: none"> <li><span style="color: blue;">■</span> Raw material acquisition stage</li> <li><span style="color: red;">■</span> Production stage</li> <li><span style="color: green;">■</span> Distribution stage</li> <li><span style="color: purple;">■</span> Use &amp; maintenance stage</li> <li><span style="color: yellow;">■</span> Disposal &amp; recycling stage</li> </ul> </div> </div>	
3.4	Remarks	*Print volume: 375,000 sheets *In this scenario, the CO <sub>2</sub> emissions from copy papers are estimated 2,900 kg-CO <sub>2</sub> e at 4.0 g per A4 paper.	

4. Interpretation of CFP quantification results	
4.1	<p>Interpretation of CFP quantification results</p> <p>CO2 emission in raw material acquisition stage is the largest as 65%. It is important to reduce size and weight.</p> <p>CO2 emission in use and maintenance stage is the second largest as 28%. It is important to save energy during product usage.</p> <p>The use condition in this scenario can be different from the use condition of the user.</p> <p>A choice of the use condition (print mode, print conditions and so on) can reduce the CO2 emission during product usage.</p> <p>For example, 91.25kg-CO2e of the CO2 emissions (approximately 7%) can be reduced if 2-in-1 print is applied to 187,500sheets (50% of print volume).</p> <p>Primary data is used in the raw material consumption. Secondary data is used in the parts manufacturing process which might not be reflected our own circumstances because it is difficult to collect the data for thousands of the parts. Please understand this result as the rough estimate according to the reason mentioned above.</p>

5. Conditions of quantification
