| | Description of additional info. | <p>*Calculated by the standard Scenario for MFP (EP type). *CO₂ emission in the distribution stage assumes the United States as the main sales area. *Electric power in the use and maintenance stage is evaluated with the public electric-power-consumption-rate in the United States. *Print volume is assumed 375,000 sheets. *In this scenario, the CO₂ emissions from copy papers are estimated 2,900 kg-CO₂e at 4.0g per A4 paper. *The CO₂ emission of printing paper is excluded from the use and maintenance stage.</p> <div style="text-align: center;">  <table border="1" style="margin: 0 auto;"> <caption>CFP Breakdown by Life Cycle Stage</caption> <thead> <tr> <th>Life Cycle Stage</th> <th>CO₂e (kg)</th> <th>Percentage</th> </tr> </thead> <tbody> <tr> <td>Raw material acquisition stage</td> <td>400</td> <td>32%</td> </tr> <tr> <td>Use & maintenance stage</td> <td>700</td> <td>57%</td> </tr> <tr> <td>Distribution stage</td> <td>80</td> <td>6%</td> </tr> <tr> <td>Disposal & recycling stage</td> <td>46</td> <td>4%</td> </tr> <tr> <td>Production stage</td> <td>12</td> <td>1%</td> </tr> </tbody> </table> </div> | | Life Cycle Stage | CO ₂ e (kg) | Percentage | Raw material acquisition stage | 400 | 32% | Use & maintenance stage | 700 | 57% | Distribution stage | 80 | 6% | Disposal & recycling stage | 46 | 4% | Production stage | 12 |

4. Interpretation of CFP quantification results

| | | |
|-----|--|--|
| 4.1 | Interpretation of CFP quantification results | <p>CO2 emission in use and maintenance stage is the largest as 57%. It is important to save energy during product usage.</p> <p>The use condition in this scenario can be different from the use condition of the user. A choice of the use condition (print mode, print conditions and so on) can reduce the CO2 emission during product usage. For example, 175kg-CO2e of the CO2 emissions (approximately 14%) can be reduced if 2-in-1 print is applied to 187,500sheets (50% of print volume).</p> <p>Primary data is used in the raw material consumption. Secondary data is used in the parts manufacturing process which might not be reflected our own circumstances because it is difficult to collect the data for thousands of the parts. Please understand this result as the rough estimate according to the reason mentioned above.</p> |
